

# KinderPrep Supplemental Number Activity

Cut out the three circles and then cut out the two shaded areas on the first circle. Attach the smallest circle to the first circle with a brad where the small dot is. Then in the center, attach the two large circles with a brad. Move the smaller circle so that it covers up the hole. Turn the circle so that you can see a set of dots. Count the number of dots and say how many there are. Move the smaller circle to look at the number underneath to see if you were right.

How many  
dots do  
you count?
