

KinderPrep Supplemental Sequence Activity

Homemade Puffy Paint

Step 1: Gather the supplies that you will need:

1 tbsp self-rising flour (if you don't have self-rising flour, then add a good size pinch of baking powder)

1 tbsp salt

about 1/8 cup of water

food coloring

Small containers to hold paint

Thick paper or thin cardboard

Q-tips or paintbrushes

Step 2: Mix the flour and salt together. Add the baking powder if needed. Slowly stir in just enough water to make the paint thick but spreadable. Divide into three or four small containers and add the food coloring.

Step 3: Paint a picture on the paper or cardboard. Have them describe what their picture is of.

Step 4: Ask them what they think will happen if you cook their painting. Microwave your artwork for 30 seconds and watch your painting puff up.

After finishing, cut out the cards below and have your child put them in the correct sequence while they explain what steps they had to do.
